

SatQuery AI — Geospatial Analysis Report

Remote Sensing Intelligence & Multimodal Evidence Verification

Job ID:	18814512-836f-4c89-978f-c8ca54a8d836
Project ID:	e64343dc-4fb3-41c3-ac45-61635ae3beaf
Task Type:	INTERNVL3
Status:	RUNNING
Generated:	2026-09-26 12:09:42 UTC

1. Request Specification

Query / Prompt: "Describe the observable environmental features and land cover classes in this satellite scene."

2. Factual Findings & Observations

Finding 1 (internvl3_finding): This satellite scene features a predominantly blue and purple color palette, suggesting a high concentration of water bodies or ice. The image shows vertical and horizontal lines, likely indicating the presence of ice formations or structures. The uniformity in color and texture suggests a single land cover class, possibly ice or frozen water. There are no visible landforms or vegetation, indicating a likely polar or glacial region.

Measurements: protocol_version: 1.0, success: True, job_id: 5a3e2ea6-1ad9-4247-9d8e-58972961a476, step_key: internvl_vqa, attempt_id: 1, output_assets: {}, output_metadata: {'answer': 'This satellite scene features a predominantly blue and purple color palette, suggesting a high concentration of water bodies or ice. 3. Operational Boundaries & Limitations

- Observations are generated based on local hardware inference (RTX 5060 Laptop GPU).
- ChangeFormer outputs represent 2D building change masks trained on LEVIR-CD.
- UPerNet semantic segmentation reflects generic ADE20K demo proxy classes unless domain-trained.
- Satellite pixel coordinates are not mapped to geographic bounds unless explicit CRS metadata is verified.
- Analyst confirmation is recommended prior to operational deployment.
