

SatQuery AI — Geospatial Analysis Report

Remote Sensing Intelligence & Multimodal Evidence Verification

Job ID:	95902220-2be3-4e61-a5a7-1066d1f77039
Project ID:	e64343dc-4fb3-41c3-ac45-61635ae3beaf
Task Type:	INTERNVL3
Status:	RUNNING
Generated:	2026-09-26 11:49:29 UTC

1. Request Specification

Query / Prompt: "Describe the observable environmental features and land cover classes in this satellite scene."

2. Factual Findings & Observations

Finding 1 (internvl3_finding): This satellite scene appears to show a grid-like pattern with varying intensities of blue and red. The land cover classes seem to be a mix of urban and possibly industrial areas, indicated by the structured and organized layout. The grid pattern suggests a systematic arrangement, which is common in urban planning or industrial zones. The blue and red colors likely represent different land cover types, with blue possibly indicating water bodies or vegetated areas, and red indicating man-made structures or roads. The overall impression is of a densely populated or industrial area with a structured layout.

Measurements: protocol_version: 1.0, success: True, job_id: c457170f-f2f7-402b-a75a-25da121a5ba9, step_key: internvl_vqa, attempt_id: 1, output_assets: {}, output_metadata: {'answer': 'This satellite scene appears to show a grid-like pattern with varying intensities of blue and red. 3. Operational Boundaries & Limitations

- Observations are generated based on local hardware inference (RTX 5060 Laptop GPU).
- ChangeFormer outputs represent 2D building change masks trained on LEVIR-CD.
- UPerNet semantic segmentation reflects generic ADE20K demo proxy classes unless domain-trained.
- Satellite pixel coordinates are not mapped to geographic bounds unless explicit CRS metadata is verified.
- Analyst confirmation is recommended prior to operational deployment.
