

SatQuery AI — Geospatial Analysis Report

Remote Sensing Intelligence & Multimodal Evidence Verification

Job ID:	ca594569-25aa-4f6b-b19b-14f630ca1d43
Project ID:	e64343dc-4fb3-41c3-ac45-61635ae3beaf
Task Type:	INTERNVL3
Status:	RUNNING
Generated:	2026-09-26 12:23:28 UTC

1. Request Specification

Query / Prompt: "Describe the observable environmental features and land cover classes in this satellite scene."

2. Factual Findings & Observations

Finding 1 (internvl3_finding): This satellite image shows a coastal area with a mix of urban and agricultural land cover. The coastline is visible on the left side, with a distinct boundary separating the land from the water. The land is densely populated with buildings, indicating urban areas. There are also patches of green fields, likely representing agricultural land. The roads and infrastructure are visible as darker lines crisscrossing the landscape. The overall scene suggests a region where urban development meets agricultural activity along the coast.

Measurements: protocol_version: 1.0, success: True, job_id: b7bea88a-baea-4eca-9826-bd8cae8cc018, step_key: internvl_vqa, attempt_id: 1, output_assets: {}, output_metadata: {'answer': 'This satellite image shows a coastal area with a mix of urban and agricultural land cover. 3. Operational Boundaries & Limitations

- Observations are generated based on local hardware inference (RTX 5060 Laptop GPU).
- ChangeFormer outputs represent 2D building change masks trained on LEVIR-CD.
- UPerNet semantic segmentation reflects generic ADE20K demo proxy classes unless domain-trained.
- Satellite pixel coordinates are not mapped to geographic bounds unless explicit CRS metadata is verified.
- Analyst confirmation is recommended prior to operational deployment.
